DISINFECTION: Remove heavy soil deposits from surface, then thoroughly wet surface with diluted solution. The solution can be applied with a cloth, mop, sponge, or coarse spray or soaking. Let solution remain on surface for a minimum of 10 minutes. Rinse or allow to air dry.

TOILET BOWLS: Swab bowl with brush to remove heavy soil prior to cleaning or disinfecting. Clean by applying diluted solution around the bowl and up under the rim. Stubborn stains may require brushing. To disinfect, first remove or expel over the inner trap the residual bowl water. Pour in three ounces of the diluted solution. Swab the bowl completely using a scrub brush or mop, making sure to get under rim. Let stand for 10 minutes or overnight, then flush.

MILDEWSTATIC: Will effectively control the growth of mold and mildew, plus the odors caused by them when applied to hard, nonporous surfaces such as walls, floors and table tops.
